

**Object Oriented Programming using Java Laboratory (DJS23FLES201)
Academic Year 2023-24**

EXPERIMENT NO. 9

NAME – SHAIKH ARSHAD AJIJ

ROLL NO – B007

BRANCH : CSE – ICB

BATCH -B1

SAP ID - 60019230064

AIM / OBJECTIVE:

To implement multiple inheritance using interfaces and method overriding

DESCRIPTION OF EXPERIMENT:

To implement multiple inheritance using interfaces and method overriding

- a. Design an interface with a method reversal. This method takes a string as input and returns the reversed string. Create a class that implements the above interface.

CODE –

```
interface StringOperations{
String reversed(String str);
}
class StringManipulator implements StringOperations{
public String reversed(String str){
StringBuilder reversed=new StringBuilder(str);
reversed.reverse();
return reversed.toString();
}
}
```

Object Oriented Programming using Java Laboratory (DJS23FLES201)
Academic Year 2023-24

```
public class Main{  
    public static void main(String args[]){  
        StringManipulator manipulator=new StringManipulator();  
        String inputString="Hello World";  
        System.out.println("Original String:"+inputString);  
        String reversedString=manipulator.reversed(inputString);  
        System.out.println("Reversed String:"+reversedString);  
    }  
}
```

OUTPUT-

```
C:\Users\Arshad\Desktop\study\java>java Main  
Original String:Hello World  
Reversed String:dlroW olleH
```

- b. WAP to implement three classes namely Student, Test and Result. Student class has member as rollno, and read(). Test class has members as sem1_marks and sem2_marks and read(). Result class has member as total. Create an interface named sports that has a member score (). Derive Test class from Student and Result class has multiple inheritances from Test and Sports. Total is formula based on sem1_marks, sem2_mark and score. Use super keyword.

Object Oriented Programming using Java Laboratory (DJS23FLES201)
Academic Year 2023-24

CODE-

```
import java.util.Scanner;

interface Sports {

    void score();

}

class Student {

    int rollno;

    void read() {

        Scanner scanner = new Scanner(System.in);

        System.out.println("Enter Roll No:");

        rollno = scanner.nextInt();

    }

}

class Test extends Student {

    int sem1_marks, sem2_marks;

    void read() {

        super.read();
```

Object Oriented Programming using Java Laboratory (DJS23FLES201)
Academic Year 2023-24

```
Scanner scanner = new Scanner(System.in);

System.out.println("Enter Semester 1 marks:");

sem1_marks = scanner.nextInt();

System.out.println("Enter Semester 2 marks:");

sem2_marks = scanner.nextInt();

}

}

class Result extends Test implements Sports {

    int total;

    public void score() {

        Scanner scanner = new Scanner(System.in);

        System.out.println("Enter Sports Score:");

        int sportsScore = scanner.nextInt();

        total = sem1_marks + sem2_marks + sportsScore;

        System.out.println("-----STUDENT RESULT-----");

        System.out.println("STUDENT ROLL NO. "+ rollno);

        System.out.println("TOTAL MARKS: " + total);

    }

}
```

Object Oriented Programming using Java Laboratory (DJS23FLES201)
Academic Year 2023-24

```
public class Main {  
  
    public static void main(String[] args) {  
  
        Result result = new Result();  
  
        result.read();  
  
        result.score();  
  
    }  
  
}
```

OUTPUT-

```
C:\Users\Arshad\Desktop\study\java>java Main  
Enter Roll No:  
7  
Enter Semester 1 marks:  
99  
Enter Semester 2 marks:  
99  
Enter Sports Score:  
85  
-----STUDENT RESULT-----  
STUDENT ROLL NO. 7  
TOTAL MARKS: 283
```

CONCLUSION:

Base all conclusions on your actual results; describe the meaning of the experiment and the implications of your results.

→ We learned about interfaces, which define a contract for classes to implement. Interfaces contain method signatures, but no method bodies. We discussed polymorphism, which allows

Object Oriented Programming using Java Laboratory (DJS23FLES201)
Academic Year 2023-24

objects of different classes to be treated as objects of a common superclass. This is achieved through method overriding and method overloading.
